

WORK EXPERIENCE

Software Engineer | Applied AI, Trust and Safety Systems

Zoom Communications Inc. | April 2022 - Current

- Designed and shipped customer-facing, in-meeting safety tools that enable hosts to quickly identify, remove, and report unwanted or disruptive participants while strengthening Zoom's enforcement UI workflows
- Developed LLM-assisted moderation and internal ticketing workflows across Zoom's Workplace Suite to detect platform misuse, generate dynamic prefilled tickets, and support efficient human review and escalation to appropriate law-enforcement agencies
- Owned end-to-end development of Zoom's child safety initiative, combining PhotoDNA hashing and AI classifiers to detect and report an average of 24 monthly cases of child sexual exploitation and abuse material
- Built risk-detection pipelines that identify a weekly average of 9.7K publicly-exposed Zoom links vulnerable to disruption, then triggering proactive host notifications with guidance for preventing or responding to violations

Technical Coach (Part Time)

Outco Inc. | September 2021 - March 2022

- Conducted 1:1 sessions with prospective Software Engineers to help them sharpen their Computer Science fundamentals, specifically using Python and JavaScript
- Facilitated mock interviews for clients and offered personalized feedback, white-boarding tips, and insights about writing succinct, readable code

Software Engineering Intern (Health Portal Team)

Guardant Health Inc. | Summer 2021

- Developed and trained an AI chatbot using Google Dialogflow and integrated it into patient support workflows, combining React, Ruby on Rails, and Node.js APIs to improve 24/7 self-service support and reduce support-team load.
- Integrated the chatbot into Guardant backend by designing a RESTful API in Node.js that can fetch the requested patient data

Software Engineering Intern (Full Stack)

Bizmatics Inc. | Summer 2019 & Summer 2020

- Replaced Bizmatics's 8-year-old UI components with modernized web interfaces that meet today's standards of responsive UI/UX using Figma and Java Server Pages
- Created a gateway of SMS texting using Java for doctor-patient communication using a web service that saved the company over 50% in texting fees
- Built a robust data import program using JDBC & Microsoft SQL that can map over 30K patient-data-entries into our software overnight

EDUCATION

University of California, Irvine

M.S. in Computer Science

Received March 2022

Specialization in Intelligent Systems

B.S. in Computer Science

Received June 2020

Specialization in Algorithms

SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL, C++

Backend: Spring Boot, REST APIs, Node.js, GraphQL, microservices, distributed systems

Frontend: React, React Native, Next.js, Vue

Cloud / Infra: AWS, Terraform, Docker, Kubernetes

Datastores / Observability: DynamoDB, PostgreSQL, MySQL, Redis, Splunk

AI / Safety: LLM-assisted workflows, AI classifiers, PhotoDNA Hashing, LangGraph, Prompt workflows, Human-in-the-loop review, Content moderation, Safety enforcement systems

Developer Tools: Cursor, Claude Code, Codex, Git, CI/CD

PROJECTS

Pinch Split

Built an iOS expense-splitting app using **GPT-5 + Gemini Flash image parsing** for receipts, saving the hassle of doing math at dinner for large parties on group trips

Distracted Driver Detection

Using **PyTorch** and **ResNet18** model with 22.4K images of distracted drivers, built a detector that can classify these distractions with validation accuracy of 99.7% on **Kaggle**

BudgetLabs

Built a web app with **React**, **Vite**, **Supabase**, and **Vercel** for helping my fiancé track vendor costs, simulate different scenarios, and visualize the category breakdowns and ultimately stay in control of the budget

Personal Relational Database

Created using C++: a Paged-File Manager, Record-Based-File Manager, a Relational Manager, Index Builder, and a Query Engine that mimics the behavior of a basic RDBMS

Face & Object Detection

With a ~93% testing accuracy and implementing **Python's Hogvis & Skimage libraries**, developed and trained a program for detecting faces as well as traffic signs
